

### **Expected outcomes and wording of the title of UNEA-3**

With regard to the theme of UNEA-3 on “pollution” and in order to have successful deliberation of the forthcoming session, the Islamic Republic of Iran would like to propose the following subjects for consideration:

1. Pollution free planet serving the Sustainable Development Goals
2. Transboundary Environment Pollutions, threatening Sustainable Development Goals.
3. Global Partnership Avoiding Long-range Transboundary Environmental pollutions

Due to increasing pollutions of water, soil and air and their subsequent transboundary effects, the Islamic Republic of Iran is of the view that UNEA-3 must mainly focus on “Transboundary Environmental pollutions”. Growth in the volume and intensity of Sand and Dust Storms, due to water, soil and climate change ecosystems mismanagement, decreasing internal and external amount of water outputs by rivers and other sources, which stems from the implementation of upstream development programs as well as upstream water and soil pollutions, have negative impacts on the health and living conditions of people. The adverse effects of “Transboundary Environmental Pollutions” on health and environment and planet life as a whole, go beyond geographical boundaries.
