

WORLD OZONE DAY IN THE REPUBLIC OF SERBIA

The Ministry of Environmental Protection of the Republic of Serbia celebrated World Ozone Day. The information in regard to this event has been posted on the website of the Ministry: <http://www.ekologija.gov.rs/medjunarodni-dan-zastite-ozonskog-omotaca-septembar-2018-ostanite-cool-i-samo-napred/>

The Ministry of Environmental Protection organized a seminar in the National park “Đerdap” and Ozone Day was celebrated on that occasion as well. There were more than 80 participants. The seminar included a visit to the National park “Đerdap”, the archeological site and museum “Viminacium”, the “Iron Gate I Hydroelectric Power Station” and the Silver Lake. During this seminar, participants had the chance to learn more about the National Park as well as the archaeological site “Viminacium” and the HEP Iron Gate.

This occasion proved to be an excellent opportunity for the celebration of World Ozone Day. In order to remind all participants of this very important day - representatives of the National Ozone Unit (NOU) presented the previous work of the NOU and future planned activities regarding the implementation of the Montreal Protocol in the Republic of Serbia and information related to the Kigali amendment and preparation for its ratification.

Promo materials – two brochures (one regarding the implementation of the Montreal Protocol in the Republic of Serbia and the other related to the Kigali amendment), posters in the English and Serbian language, notebooks, pencils, bookmarks, calendars for 2019, hand fans and bags in three colors, were prepared for this occasion and distributed to all participants of the meeting.

Also, during the week of celebrations the Ministry of Environmental Protection organized a few meetings related to the beginning of training for service technicians and a Draft manual for service technicians was presented.

We will continue with the celebration of World Ozone Day at the “EcoFair” which will be held from 3 to 5 October in Belgrade. On that occasion, the importance of the ozone layer will be presented and the promo material will be delivered to visitors.
